Building Permit Requirements Notice

Portage Fire Rescue requires that all contractors submitting for a building permit provide the necessary documentation related to fire and life safety systems in accordance with applicable codes and standards.

This includes compliance with, but is not limited to, standards established by the National Fire Protection Association (NFPA), the Wisconsin Department of Safety and Professional Services (DSPS), and the International Code Council, including the International Fire Code (IFC).

Required documentation must include any components or project details that may trigger the need for fire suppression systems, fire alarm systems, and building modifications that require testing, inspection, or plan review.

Contractors are responsible for identifying applicable requirements under these codes and regulations and submitting all necessary plans, specifications, and supporting documentation prior to the issuance of a building permit. This includes any required plan reviews or approvals through the State of Wisconsin where applicable.

Failure to provide the required information may result in delays in permit approval and project timelines.

Portage Fire Rescue appreciates your cooperation in ensuring all projects meet applicable fire and life safety codes and standards.

Thank You,

Ryan Armson
Lieutenant Inspector
Portage Fire Rescue
